

The figure displays a 10x10 grid where each cell's color represents a value. The background is a solid red, indicating low values. A prominent diagonal line of yellow and orange cells runs from the top-left to the bottom-right, indicating high values. The intensity of the yellow is highest along the main diagonal and decreases as it moves away from the center. There are also several off-diagonal cells with orange and yellow hues, suggesting some correlation or interaction between non-adjacent elements.
